

Raymond Abiola

Blockchain Developer · Smart Contract Engineer · Uniswap v4 Hooks · Solidity / TypeScript

raymondintell@gmail.com | github.com/RaymondAbiola | linkedin.com/in/raymondabiola | Lagos, Nigeria

AWARDS

Hookathon Track Winner

Uniswap Hook Incubator — Cohort 10 (UHI-10)

Theme: MEV protection & sustainable low-fee liquidity on Uniswap v4 · Sep 2026

SKILLS

Languages

Solidity, TypeScript, JavaScript

Contract Tooling

Foundry, Hardhat, OpenZeppelin, Remix, Forge

Web3 & Frontend

ethers.js, viem, wagmi, React, Next.js, Tailwind

Testing & Quality

Foundry Tests, Mocha, Chai, Mainnet Forking, Gas Profiling

Uniswap v4 & MEV

v4 Hooks, PoolManager, ERC-6909 Claims, Dynamic Fees, Markout Analysis

Concepts

DeFi, Access Control, Reentrancy Safety, ERC-20 / 721, Security Auditing

EDUCATION

Uniswap Hook Incubator — Cohort 10

Atrium Academy · Uniswap Foundation
2026 · Online

Intensive Solidity & dApp Development

Web3Bridge Africa
Jan 2026 — May 2026 · Onsite

Solidity Foundation Bootcamp

Encode Club
Sep 2022 — Oct 2022

Blockchain Developer Bootcamp

EatTheBlocks
Mar 2022 — May 2022

B.Eng, Chemical Engineering

University of Benin
2011 — 2016

PROFILE

Solidity developer with hands-on experience building secure, gas-efficient EVM smart contracts and the dApps around them using Foundry, Hardhat, OpenZeppelin and TypeScript. Track winner at the Uniswap Hook Incubator (UHI-10) for a v4 hook that prices MEV on realised outcomes rather than predictions, validated against 26,209 real mainnet swaps. Four years in the blockchain space, now focused on shipping well-tested, maintainable on-chain systems. Specialises in DeFi, Uniswap v4 hooks, mechanism design, security best-practices and gas optimisation.

EXPERIENCE

Hook Developer — Impact Rebated Fees

Sep 2026

Uniswap Hook Incubator (UHI-10) · Track Winner · Solo

- Won a prize track at the UHI-10 Hookathon with a Uniswap v4 hook that settles each swap's fee *after* the trade on realised price drift — charging on an observed outcome instead of a pre-swap prediction, with no oracle or off-chain service.
- Validated against 26,209 real USDC/WETH mainnet swaps: +32.7% LP revenue over the base fee, at an expected cost of 0.71 bps to an uninformed trader.
- Stack: Solidity 0.8.26, Uniswap v4, ERC-6909 claims, Foundry (26 tests, 96% coverage), Python, Next.js + wagmi.

Smart Contract Developer — TrustWork (Capstone)

2026

Web3Bridge Bootcamp · Team of 5

- Built a decentralized freelancer escrow platform with milestone payments and DAO-arbitrated disputes across a 4-contract system (escrow, staked arbitrator DAO, soulbound reputation NFTs, profile registry).
- Stack: Solidity 0.8.28, Foundry, OpenZeppelin v5, ERC-2771 meta-tx, Next.js + wagmi, USDC on Lisk.

Community Manager — youves DeFi Protocol

Nov 2021 — Jun 2024

Papers AG · Remote (Zug, Switzerland)

- Tested pre-release smart contracts and reported bugs and edge cases to the dev team, improving launch safety.
- Coordinated product launches and ran Python scripts to generate weekly protocol statistics for the community.

KEY PROJECTS

Impact Rebated Fees — Uniswap v4 hook charging a refundable 25 bps deposit settled on post-swap price drift (UHI-10 track winner). Live on Unichain Sepolia.

Solidity · Uniswap v4 · Foundry · ERC-6909 · Python — impact-rebated-fees.vercel.app

FedVote — Tamper-resistant on-chain national voting (Hedera hackathon, team lead of 5). 8-contract system with role-based access control, soulbound NFT badges and streak-based incentives.

Solidity · Foundry · OpenZeppelin · React · ethers.js — github.com/RaymondAbiola/FedVote

SafeCircles — Peer-to-peer microinsurance with photo-evidenced claims and on-chain governance voting (Monad hackathon, team lead of 2).

Solidity · Foundry · Next.js · wagmi · IPFS — github.com/RaymondAbiola/SafeCircles
